Energy windows
make you feel better!

*Remove the causes of your tiredness
and a loss of will.*

Enjoy fresh and clean air indoors.

INTRODUCTION

People spend today, on average, more than **80 percent** of their time indoors. We are confronted with numerous electronic devices and appliances that pollute the air, generating harmful positively-charged ions and reducing those negative ions in space, beneficial for your health.

» Poor indoor air quality results in tiredness and a loss of will.

Poor air quality and a destructive relationship between positive and negative ions in the air can be the cause of headaches and poor well-being. Work efficiency and concentration decrease and we are more prone to illness.

We, at the MIK company, bearing in mind the importance of life's quality, are constantly striving for further development. In cooperation with the recognized innovator Vili Poznik from Celje **we have developed specific Energy windows with incorporated information cells. Their function is to recuperate air and water within closed rooms by returning those properties to them that they normally enjoy within unpolluted nature. They increase the number of negative ions, and demonstrate a positive impact on our well-being. The positive effects of Energy windows were examined using physical, biological and chemical methods.** Investigations were carried out by

independent experts: Prof. dr. Peter Bukovec from the Faculty of Chemistry and Chemical Technology in Ljubljana, the Russian physicist dr. Yuri Yatsko, and the biologist Peter Firbas from the Laboratory for Plant Cytogenetics. **All their studies confirmed the positive influence of Energy windows on living organisms.**

The concentration of negative ions in the forests and hills is significantly higher than in cities, and much higher than indoors. This is the reason why walking through the woods or in the mountains invigorates, refreshes and stimulates us so much. To have a positive affect on our well-being we need indoor air as in unspoiled nature.

Quality and healthy indoor environments can be achieved by Energy windows that strike a balance between positive and negative ions and thus provide quality indoor air.

MIK energy-discs can easily be attached to already installed windows

Energy-discs can be obtained as separate elements and attached to your windows, regardless of the windows' material or form. If you are about to replace old windows we recommend you choose Energy windows with already-attached energy-discs.

ENERGY WINDOWS. WISE SOLUTIONS.

Ensure good quality air where you need it

Energy windows are classically designed. They are available in different shapes and sizes, and made of PVC, wood or aluminium. They only differ from other window systems by their **incorporated special MIK energy-discs, encoded according to the original MOP Poznik technology. The energy programme modifies the chemical and physical properties of water and air within a room, which then has a beneficial effect on the well-being of humans, animals and plants therein.**

For the optimal efficiency of Energy windows, one energy disc should suffice for a room no bigger than 25 m².

1
25m²

Being full of energy and well-being at home or at work

Energy windows are recommended for use in all those rooms where you spend most of your time, and where you are more active and creative. Ionizing living rooms, children's rooms, offices, hospital rooms, hotel rooms, and homes for elderly people will improve your well-being when in these rooms and increase your efficiency and effectiveness. The human body only takes from the air as many negative ions as it needs for well-being and nothing more.

ENERGY WINDOWS:

- cleanse the air
- refresh spaces
- enhance and extend your concentration
- reduce physical fatigue

The harmonisation of air and water in a room equipped with MIK Energy windows is 4 times better than in a room without MIK Energy windows.

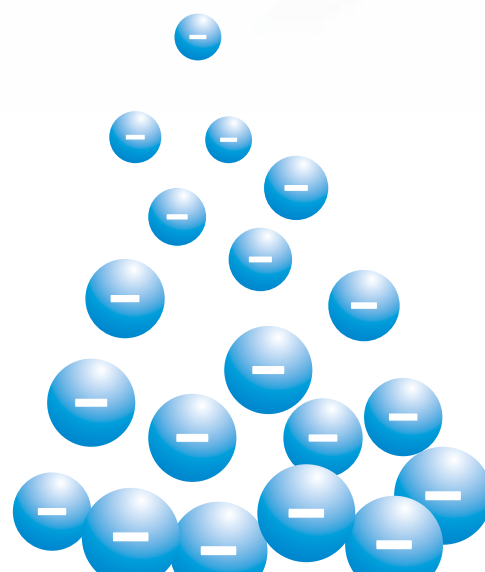

Room	IMPACT	The level of harmonisation of living areas
A	Non-ventilated space without the device for the harmonisation of living areas	1
	During the operation of the device for the harmonisation of living areas	2 <i>falls after switching off</i>
	During ventilation	3 <i>falls after ventilation</i>
B	A room equipped with Energy windows	4 <i>remains constant</i>

Energy windows operate without interruption and do not require additional energy

In order to facilitate your well-being within closed spaces, air energy in your rooms needs to be improved and the concentration of negative ions in the air increased, respectively. The amount of negative ions within a space can be increased in various ways. Air can be ionized by means of Energy windows, ionizers or ventilation of spaces. The quality and impact of Energy windows regarding the air and water qualities within rooms were compared with the effects of ventilation and ionization.

IMPACT	Increased water energy (%)	Increased air energy (%)
A room equipped with Energy windows	7.9	11.8
Ventilation	3.2	4.2
Device for the harmonisation of living areas	0.7	1.1

The effect of MIK Energy windows, ventilation and device for the harmonisation of air onto the energy of water and air in a room. The measurements and comparison of effects were conducted by Prof. Dr. Peter Bukovec at the Institute for Sustainable Development.

Impact of activity

- Compared to the effects of the device for the harmonisation of living areas, **Energy windows** have a ten times higher impact on water and air change within a space.
- During their operation, **Energy windows** do not require any additional power or connection to the power supply.

RESEARCH

Energy windows decrease the possibility of human cells' failure.

The impacts of Energy windows on our environment and human beings were also researched using cytogenetic studies or the ALLIUM test, respectively. The ALLIUM biological method reveals the influence of the environment on the growth and development of living cells within an organism. The results of the research showed that - in otherwise identical conditions within a room, the number of intact cells in an organism exposed to the energy windows was 46 percent higher than in organisms that were not ex-

posed to positive energy. An obvious difference (25 percent) was shown in the growth of organisms, especially in the lengths and strengths of roots. In regard to the universality of the living organisms' genetic codes, the research results are transferable to human beings, thus providing a very detailed picture of the environmental space quality, and confirming that Energy windows improve environmental quality. This confirms that energy windows positively influence our well-being and health.

Biological Allium tests were carried out by the biologist Peter Firbas, BSc. at the Laboratory for Plant Cytogenetics.

IMPACT

+40%

Have a 40% improved effect on your well-being due to a unique Energy window.

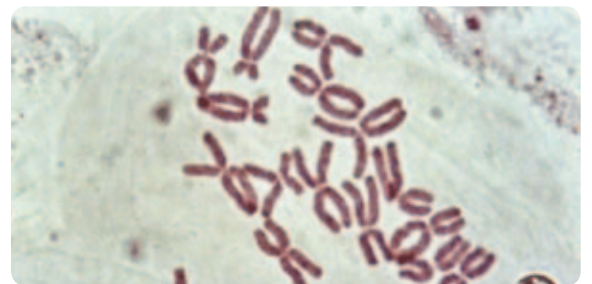

The impact of Energy windows on human's well-being was also checked using the Kirlian camera. It allows for visualization of the human bio-electromagnetic field. The average man's energetic parameters were reported as having improved by up to 40

percent. Parameters increased by up to 20 percent for those individuals who had a lot of energy but rose by more than 100 percent for individuals with large energy deficits.

GUARANTEE

100%

If the product does not meet your expectations, we will refund your money

Take a photo of your plants before the installation of your Energy windows and then one month after installation. Compare the two photos. If you can't notice any difference in the plants or in your well-

being, or you are dissatisfied with our energy-disc, simply return it to our address. The initial price paid by you for the energy-disc will be reimbursed.
